What are the special problems involved in surveying immigrant populations and ethnic minorities? How can we ensure adequate representation of these growing groups in general population surveys? This book is the first to address these challenges in a systematic way. Experiences from eight Western countries, involving more than a dozen surveys, are used to explore difficulties in designing these types of surveys and some of the choices made to deal with them. The rich array of cases covered gives rise to valuable lessons, from local and national surveys, well-funded surveys and those with limited means, and on a wide variety of topics ranging from politics to health.

Joan Font is a senior researcher at the Institute for Advanced Social Studies (IESA), National Research Council (CSIC), Córdoba. Mónica Méndez is a survey methodology specialist at the Sociological Research Centre (CIS) in Madrid.

“Even survey methodologists and researchers who are not directly concerned with immigration as such will gain from reading the book and keeping it as reference.”
Howard Schuman, University of Michigan

“This book is a must read for students and researchers who take serious the real technical and methodological challenges in surveying ethnic minorities and immigrant populations.”
Marc Swyngedouw, University of Leuven

“An excellent review of different methodological challenges in survey research on migrant populations … a good introduction to survey research on migrants for researchers and students alike.”
Albert Keeler, International Centre for Migration Policy Development
